Operating Instructions

IMPORTANT NOTE

If your wheels are spinning, STOP as soon as you can. Spinning the tire will likely cause the vehicle to get buried further.

Step 1:

If needed, clean away any debris from the undercarriage components such as axles, differentials, control arms, etc. You can flip the board over and use the bottom like you would a shovel. It is important that the weight of the vehicle is on the tires in order for the traction boards to work properly.

Step 2:

Once all the debris is clear, place the boards under each of the front tires (if you are going forward) or under the rear tires (if you are going backward)

Note: Make sure the boards are securely and firmly up against the tread of the tires.

Step 3:

Make sure your path is clear prior to proceeding. Then, proceed slowly (in a low gear) and ease into acceleration. This will help allow your tires to “grab” the boards and regain traction. If your tires begin to spin, STOP immediately to prevent damage. If you are still having issues getting traction, reposition the boards.
